For more information on our current warranty, please visit:
<http://www.craft-art.com/services/craft-art-warranty/>

Following the installation, care, and maintenance instructions will extend the life of your countertop. Failure to follow these instructions will void the warranty. Accidents do happen, so if you have any issues with your countertop, please have your installer contact us immediately for a damage assessment and repair quote.

Original Tung Oil Finish

Lifetime guarantee to only the original buyer against defect in workmanship and 1 year warranty on material from the original date of sale under normal indoor residential use in the original location.

There is no express or implied warranty with respect to water or stain damage. Craft Art products, as delivered, are highly water-resistant and will remain so if properly maintained and re-oiled in accordance with Craft Art's maintenance instructions. Craft-Art products, like all solid wood products, expand and contract with changes in temperature, humidity, and other environmental factors. This expansion and contraction may cause small changes in the countertop. Changes due to environmental factors are not considered defects. Changes due to expansion and contraction vary by wood species and by local environmental conditions.

Penetrating Mineral Oil Finish, DIY & Unfinished

Surface Flatness

Craft Art's specifications for flatness of its surfaces with less than 2" overhangs is 1/2" maximum upcurl/downcurl in the cross grain direction.

Craft Art's specification for flatness of its surfaces with greater than 2" overhangs is 1/4" upcurl/downcurl in any grain direction for each 4" of overhang.

It is well documented that wood continues to expand and contract long after production based on environmental conditions. Any claim for surface flatness must provide substantial documentation from the installer demonstrating:

1. Countertops were installed with screws, corner brackets and oversized holes to accommodate wood expansion/contraction
2. No adhesive/silicone was used to adhere the countertop to the cabinet (or other) surface
3. Sufficient information must be given to demonstrate that the installer attempted to achieve a flat surface by adjusting screw tension and depth in the corner brackets used to adhere the countertop
4. Overhangs over 8 inches were properly supported per the installation guide set forth by Craft-Art
